

Pedigo is proud to introduce our sealed Surgical Case Carts. These carts provide an added level of protection against dust and debris. Features a full seal around the door perimeter and center stop. Withstands cart wash/dry temperatures and sanitizing detergents.

OPTIONAL FEATURES

- Security Latch
- Heavy Duty 6" x 2" Casters
- Color Identification Wheel
- Sloped Bottom
- Barcode Plate Holder
- 8½" x 11" Card Holder

Color Identification Wheel

As an added option, a color ID wheel allows the hospital to identify various case carts for specific applications. This allows for easy identification of completed carts without breaking the tamper proof seal and compromising the contents.

Sealed Doors

Integrated silicon door seal installed on the interior of the doors, including the seam between the doors. The seal protects the sterile contents inside of the cart from the outside environment.

Sloped Bottom

The 2° slope forces fluids to the back of the cart for fluid containment. The contained fluids will drain out the front of the cart during cart washing.

Locking Shelves

Optional lock on roll out shelf holds the shelf in either the open or closed position.

Heavy Duty Casters

Optional Stainless Steel 6" diameter casters with a 2" wide wheel. Higher load rating for improved durability. Two Swivel Casters on the pushing end of the cart and two rigid casters on the opposite end.

Standard Casters

Carts come with 6" diameter swivel chrome casters and a 1¼" wide wheel.

Total Lock Brake

Optional feature recommended for offsite sterile processing. Casters can be locked after carts are loaded onto trucks.
